Quick Start Checklist

Before you dive in, here's your one-page guide to getting the most out of The Motion Blueprint.

Step One

Pick Your Path

Decide between the 3-Day Total Body or 4-Day Upper/Lower plan. Both work - choose the one that fits your schedule and lifestyle.

Step Two

Learn the Warm Up

Review the 6-step warm-up framework. This sequence will be the foundation of every session.

Step Three

Learn the RPE

Use the Rate of Perceived Exertion scale to guide your intensity. Aim for RPE 6-8 on most working sets and go up from there as the weeks progress.

Step Four

Set Up Your Space

Gather basic equipment: dumbbells, kettlebells, bands, and a barbell if available.

Step Five

Follow the Flow

Each workout is structured as: Warm-up, Power, Strength Supersets, Finisher.

Step Six

Stay Consistent

Pick 3-4 training days you can commit to. Consistency beats perfection!

Step Seven

Know What's Next

This is your sample week. For ongoing progressions and monthly updates, the Theory of Motion App is where the journey continues!

Welcome to *The Motion Blueprint.*

WELCOME LETTER

We're Jason and Lauren, a husband-and-wife coaching duo, and we couldn't be more excited that you're here. Our story starts back in 2007, when we began coaching clients on gym floors with nothing more than a passion for helping people move and feel better. Over the years, that passion became a career. From 2011 to 2021 we owned our own gym, where we coached thousands of people face-to-face and refined our methods with every single session. Those years shaped the backbone of the Theory of Motion philosophy: training real people, solving real problems, and finding strategies that actually work outside of textbooks and social media trends.

We've always believed that coaching is both a science and an art. To sharpen the science, we've invested heavily in our own continuing education - earning credentials from the National Academy of Sports Medicine, Functional Movement Systems, the Postural Restoration Institute, StrongFirst, USA Weightlifting, and Precision Nutrition, and learning directly from some of the top strength and conditioning coaches in the industry. To refine the art, we've taught workshops around the country, mentored other trainers and fitness professionals, and continued to learn from every person who has trusted us with their training.

In 2015 we began sharing our message online, never imagining it would grow into a community of over 2 million people across our social media platforms. But the heart of our work hasn't changed. Whether it's in a gym, on a workshop floor, or through a screen, our mission is the same: to help you build functional strength, mobility, athleticism, and resilience that lasts.

This Blueprint is our way of handing you the best of what we've learned - the framework we use with our own clients and in our own training. It's comprehensive, practical, and built to meet you where you are. Inside, you'll find not just a list of exercises, but a full system: a warm-up structure that prepares you for success, workouts that blend power, strength, and function, and strategies to progressively overload to avoid plateauing.

We're honored to share this with you. Now it's your turn to put the system into practice and see how it works for you.

Let's get into it!

OUR APPROACH

Why Theory of Motion is Different

THE THEORY OF MOTION DIFFERENCE

Movement Before Muscle: We prioritize mobility and stability so you can train safely, effectively, and for the long haul.

Athlete-Inspired Strength: Single-leg training, rotation, multi-planar movement, core strength, and plyometrics build a body that's powerful in every direction.

Integrated Core Training: Your core does more than flex and crunch. We train it in all 8 patterns: flexion, anti-flexion, extension, anti-extension, rotation, anti-rotation, lateral flexion, and anti-lateral flexion to develop a strong and resilient mid-section.

Function Meets Aesthetics: We don't sacrifice looking strong and athletic, but we go beyond appearances by building resilience and performance.

THE PROBLEM WITH TRADITIONAL TRAINING

- Overemphasis on machines and fixed movement patterns.
- Body-part splits that neglect how the body actually works as an integrated system.
- Minimal focus on mobility, stability, resilience, or movement quality.
- Muscle that looks good in the mirror but doesn't always carry over to real life.

When you train this way, the benefits go far beyond the gym: picking up your kids, running faster, moving furniture, playing sports, or just feeling younger and more capable in daily life.

Before We Begin

SUPERSETS EXPLAINED

A superset is when you pair two exercises back-to-back with little to no rest in between. This structure saves time, increases training density, and creates balance in your workouts. For example, you might pair a squat (lower body strength) with a plank variation (core stability), or a bench press (pushing) with a row (pulling). Supersets allow you to train more efficiently while challenging different muscle groups in sequence, which keeps intensity high without compromising form. We design supersets with intention: pushing and pulling together, posterior chain with anterior chain, or upper body paired with lower body. This ensures your body develops as a coordinated, balanced system.

That said, supersets may not work for everyone. Some people feel too gassed to maintain good quality when pairing movements, and others may find it logistically challenging in a busy gym setting. In these cases, straight sets (doing all sets of one exercise before moving on) are perfectly acceptable and will not take away from your results. Choose the option that best fits your energy levels and training environment.

PROGRESSIVE OVERLOAD

Progressive overload is the principle that drives long-term results. In simple terms, it means gradually increasing the challenge of your workouts so your body continues to adapt. Without progressive overload, your body will eventually plateau and stop making progress.

The most practical way to apply this is simple: for every exercise, strive to add a little more weight, 1 more rep, or 1 more set from week to week. These small, measurable progressions ensure that you're

consistently pushing your body to grow stronger and more resilient. You don't need to progress every variable in every session - just focus on steady improvement on a weekly basis. Over months, these small steps add up to major strength and performance gains.

RPE EXPLAINED

We use the **Rate of Perceived Exertion (RPE)** scale to guide how hard you should be working. Think of it as a 1-10 scale:

- ❏ **RPE 1-4:** Very easy to light effort; warm-ups, technique work.
- ❏ **RPE 5-6:** Moderate effort; you could do 4-5 more reps if you had to.
- ❏ **RPE 7-8:** Hard effort; you could do 2-3 more reps in reserve.
- ❏ **RPE 9-10:** Maximum effort; 0-1 reps left in reserve.

Most of your working sets should land in the RPE 6-8 range. This allows you to train hard while still having room to progress over time. It can be challenging at first to gauge RPE, but with practice, you'll get better at feeling how close you are to your limit!

The Philosophy: *Warm-Up Advantage*

SETTING THE FOUNDATION

A warm-up isn't just about "getting loose" or getting your body temperature up. At Theory of Motion, our 6-step warm-up framework is designed to prepare the entire system: breathing mechanics, joints, muscles, and nervous system - for high-quality work. By starting with breathing, then progressing through lower and upper body mobility drills, total-body integration movements, prehab exercises, and core

training, we make sure your body is primed to move well and handle load safely. This approach turns every session into a teaching moment for better mechanics and long-term resilience.

Step By Step *Flow*

01 Breathing

Each session starts by resetting posture and activating the diaphragm. This calms the nervous system, reinforces rib and core position, and sets the tone for controlled, efficient movement.

02 Lower Body

Mobilizing the hips, knees, and ankles opens the foundation of your movement. Freeing these joints early means squats, hinges, and lunges later in the workout feel stronger and safer.

03 Upper Body

Preparing the shoulders and thoracic spine ensures pressing, pulling, and overhead motions are smoother. A mobile upper body reduces strain on the neck and lower back.

04 Total Body

Integrated drills connect upper and lower chains, teaching the body to coordinate as a single unit. These movements bridge the gap between warm-up and training.

05 Prehab

Each day spotlights one vulnerable area like the rotator cuff, calves, or adductors. This small investment builds resilience and keeps nagging issues from turning into bigger setbacks.

06 Core

We finish by challenging one of the 8 core patterns. Training the trunk last in the sequence "locks in" stability, helping you carry strength and control into the main workout.

The Warm Up

For every workout of this program, the first four steps of the warm-up will stay the same: breathing, lower body mobility, upper body mobility, and total body integration. These create a consistent foundation so your body always knows what to expect and can build great habits.

The last two steps (Prehab and Core) will rotate depending on the day's emphasis. This way, you target specific areas that need care and attention, and cycle through the 8 core patterns to keep your trunk strong and resilient from every angle.

DAY 1 LOWER FOCUS

01 BREATHING

[Hooklying Breathing](#)

6 slow breaths. Inhale through your nose for 4 seconds, exhale through your mouth for 4 seconds. Focus on expanding your midsection 360° on the inhale and gently compressing on the exhale.

02 LOWER BODY

[90/90 Hip Switch](#)

8 reps/side. Opens the hips and addresses rotation.

03 UPPER BODY

[Quadruped Heel Sit T-Spine Rotation](#)

8 reps/side. Improves upper back rotation and shoulder mobility.

04 TOTAL BODY

[Spiderman Lunge with Rotation](#)

4 reps/side. Integrates hips, spine, and shoulders together.

05 PREHAB

[Leaning Wall Double Leg Calf Raises](#) or [Leaning Wall Single Leg Calf Raises](#)

2 sets of 12-15 reps (or 8-12 reps/side for the single leg version.) Builds calf strength and ankle mobility. Superset with the core move down below!

06 CORE

[Bench Reverse Plank Hip Flexor Raises](#)

2 sets of 6 reps/side and hold for 3 seconds at the top of each rep. Strengthens hip flexors and challenges trunk stability.

The Warm Up

DAY 2 UPPER FOCUS

01 BREATHING

[Hooklying Breathing](#)

6 slow breaths. Inhale through your nose for 4 seconds, exhale through your mouth for 4 seconds. Focus on expanding your midsection 360° on the inhale and gently compressing on the exhale.

02 LOWER BODY

[90/90 Hip Switch](#)

8 reps/side. Opens the hips and addresses rotation.

03 UPPER BODY

[Quadruped Heel Sit T-Spine Rotation](#)

8 reps/side. Improves upper back rotation and shoulder mobility.

04 TOTAL BODY

[Spiderman Lunge with Rotation](#)

4 reps/side. Integrates hips, spine, and shoulders together.

05 PREHAB

[1DB Seated External Rotation](#)

2 sets of 12 reps/side. Targets the rotator cuff and shoulder stabilizers.
Superset with the core move down below!

06 CORE

[Tall Plank Alternating Shoulder Taps](#)

2 sets of 8 reps/side. Challenges trunk strength and shoulder stability.

The Warm Up

DAY 3 LOWER FOCUS

01 BREATHING

[Hooklying Breathing](#)

6 slow breaths. Inhale through your nose for 4 seconds, exhale through your mouth for 4 seconds. Focus on expanding your midsection 360° on the inhale and gently compressing on the exhale.

02 LOWER BODY

[90/90 Hip Switch](#)

8 reps/side. Opens the hips and addresses rotation.

03 UPPER BODY

[Quadruped Heel Sit T-Spine Rotation](#)

8 reps/side. Improves upper back rotation and shoulder mobility.

04 TOTAL BODY

[Spiderman Lunge with Rotation](#)

4 reps/side. Integrates hips, spine, and shoulders together.

05 PREHAB

[Side Lying Hip Adduction](#)

2 sets of 12-15 reps/side. Addresses adductor strength - feel free to add an ankle weight for further challenge. Superset with the core move down below!

06 CORE

[Side Plank with Twist](#)

2 sets of 8-10 reps/side. Targets core stability and rotation.

The Warm Up

DAY 4 UPPER FOCUS

01 BREATHING

[Hooklying Breathing](#)

6 slow breaths. Inhale through your nose for 4 seconds, exhale through your mouth for 4 seconds. Focus on expanding your midsection 360° on the inhale and gently compressing on the exhale.

02 LOWER BODY

[90/90 Hip Switch](#)

8 reps/side. Opens the hips and addresses rotation.

03 UPPER BODY

[Quadruped Heel Sit T-Spine Rotation](#)

8 reps/side. Improves upper back rotation and shoulder mobility.

04 TOTAL BODY

[Spiderman Lunge with Rotation](#)

4 reps/side. Integrates hips, spine, and shoulders together.

05 PREHAB

[Seated Wall Slide](#)

2 sets of 12-15 reps (or 8-12 reps/side for the single leg version.) Builds calf strength and ankle mobility. Superset with the core move down below!

06 CORE

[Suitcase Carry](#)

2 sets of 20-30 seconds/side. Targets core stability and grip strength.

Plan *Introductions*

We've built this Blueprint with two different tracks so you can choose the one that best matches your lifestyle and goals. Both are rooted in the same Theory of Motion framework, but offer different levels of commitment. The 3-Day Total Body Blueprint gives you an efficient, well-rounded plan you can

repeat consistently, while the 4-Day Upper/Lower Blueprint lets you train with more volume and progression. Neither is better - they're just different paths to the same destination: moving, feeling, and performing at your best.

3-DAY TOTAL BODY BLUEPRINT

The 3-Day Total Body Blueprint is designed to give you maximum return on minimal time investment. Each workout hits every major movement pattern: push, pull, squat, hinge, core, and power - so

nothing gets left behind. This path is perfect if you're busy, getting back into training, or just want a simple but powerful structure that builds strength, mobility, and energy for everyday life.

DAY 1

Day one is almost always our squat day and has more of a lower body emphasis.

A. POWER DEVELOPMENT

You have two options here:

- 01 [Box Jumps](#): 3 sets of 5. Rest 30 seconds between sets.
- 02 [Squat Jumps](#): 3 sets of 5. Rest 30 seconds between sets. Choose this option if you don't have an elevated surface you can jump onto.

B1. SQUAT VARIATIONS

You have two options here:

- 01 [Barbell Back Squat](#): 4 sets of 8. Choose high bar or low bar and use a weight at a 6-7 RPE.
- 02 [Dumbbell Goblet Squat](#): 4 sets of 8 at a 6-7 RPE. Choose this option if you don't have access to a barbell/squat rack.

Rest 60-120 seconds and superset with the B2 movement.

B2. ISOLATION REAR DELTS

You have two options here:

- 01 [2DB Bent Over Reverse Flye](#): 3 sets of 10 at a 8 RPE.
- 02 [Cable Rear Delt Crossover Flye](#): 3 sets of 10 at a 8 RPE. If you have access to a cable machine, you can opt for these instead.

Rest 60-120 seconds and return to the B1 movement.

C1. SINGLE-LEG: KNEE DOMINANT

You have two options here:

- 01 [Goblet Reverse Lunge](#): 3 sets of 8 reps/side at a 7-8 RPE.
[Goblet Deficit Reverse Lunge](#): 3 sets of 8 reps/side at a 7-8 RPE. Use a 2-4" elevation for increased range of motion.

Rest 60-120 seconds and superset with the C2 movement below.

DAY 1 CONTINUED

Day one is almost always our squat day and has more of a lower body emphasis.

C2. PUSHING VARIATIONS

You have two options here:

- 01 [2DB Alternating Incline Bench Press](#): 3 sets of 8 reps/ side at a 7-8 RPE.
- 02 [2DB Seated Seesaw Overhead Press](#): 3 sets of 8 reps/ side at a 7-8 RPE. Choose this option if you don't have access to an incline bench!
Rest 60 seconds and return to the C1 movement above.

E. FINISHER

Perform this sequence back-to-back-to-back in a circuit for 4 total rounds.

- 01 [2KB/2DB Farmer Carry](#): 30 seconds
- 02 [Tall Plank KB/DB Drag](#): 30 seconds
- 03 Rest: 30 seconds

D1. ISOLATION: HAMSTRINGS

Choose from one of the following options in this hamstring series:

[Stability Ball Hamstring Curl Series](#): 3 sets of 10-12 reps (on each side if applicable) at a 8-9 RPE.

Rest 60-120 seconds and superset with the D2 movement below.

D2. CORE: FLEXION

Choose from one of the following options in this core series:

[Tuck Up Series](#): 3 sets of 8-10 reps (on each side if applicable) at a 8-9 RPE.

Rest 60 seconds and return to the D1 movement above.

DAY 2

Day two is our bench press day and emphasizes upper body pushing and pulling.

A. POWER

Choose from one of the following options in this plyo pushup series:

[Plyo Pushup](#): 3 sets of 5. Rest 45-60 seconds between sets.

B1. BENCH PRESS VARIATIONS

You have two options here:

- 01 [Barbell Bench Press](#): 4 sets of 8 at a 6-7 RPE.
 - 02 [2DB Bench Press](#): 4 sets of 8 at a 6-7 RPE. Choose this option if you don't have access to a barbell/squat rack.
- Rest 60 seconds and superset with the B2 movement down below.

B2. SINGLE-LEG: HIP DOMINANT

You have two options here:

- 01 [1DB Suitcase Rear Foot Elevated SL Deadlift](#): 3 sets of 8 reps/side at a 7-8 RPE.
- 02 [1DB Suitcase Staggered Stance RDL](#): 3 sets of 8 reps/side at a 7-8 RPE. Choose this variation if the balance aspect is too challenging on the rear foot elevated version.

Rest 60 seconds and return to the B1 movement above.

C1. OVERHEAD PRESSING VARIATIONS

You have two options:

- 01 [1/2 Kneeling Single Arm Overhead Press](#): 3 sets of 8 reps/side at a 7 RPE.
- 02 [Standing Single Arm DB Overhead Press](#): 3 sets of 8 reps/side at a 7 RPE. Choose this option if kneeling bothers your knees.

Rest 60 seconds and superset with the C2 movement.

C2. ROW VARIATION

[DB 3-Point Row](#): 3 x 10 reps/side at a 7 RPE.

Rest 60 seconds and return to the C1 movement.

D1. ISOLATION: DELTS

[2DB Lateral Raise](#): 3 sets of 12 at a 8-9 RPE.

Rest 60 seconds and superset with the D2 movement down below.

D2. ISOLATION: ARMS

[2DB Seated Biceps Curl](#): 3 sets of 12 at a 8-9 RPE.

Rest 60 seconds and return to the D1 movement above.

E. FINISHER

Choose between any cardio modality (running, rowing, biking, jumprope, burpees, etc.) and perform:

- 🏹 30 seconds at a steady pace (~RPE 6)
- 🏹 20 seconds at a fast pace (~RPE 8)
- 🏹 10 seconds all-out effort (~RPE 10)

Perform 3-4 rounds with 30-60 seconds in between rounds.

DAY 3

Day three is our deadlift day and has more of a balanced emphasis.

A. POWER

You have two options here:

- 01 [Kettlebell Swing](#): 3 sets of 8 at a 6-7 RPE. Pick a weight that feels snappy and powerful. Rest 45-60 seconds between sets.
- 02 [Broad Jumps](#): 3 sets of 5. Rest 30-45 seconds between sets. Choose this option if you'd prefer a jumping power development variation.

B1. DEADLIFT VARIATIONS

You have two options here:

- 01 [Barbell Deadlift](#): 4 sets of 5 at a 7 RPE.
- 02 [Trap Bar Deadlift](#) or [Kettlebell Deadlift](#): 4 x 5 at a 7 RPE.

Rest 60-120 seconds and superset with the B2 movement down below.

B2. PUSHUP VARIATIONS

Choose from one of the following options in this pushup series:

[Pushup Series](#): 4 sets of 8. Choose the variation in the series that you can perform 10-12 reps of.

Rest 60 seconds and return to the B1 movement above.

C1. MULTI-PLANAR STRENGTH

[Goblet Lateral Lunge](#): 3 sets of 8/side at a 7-8 RPE.

Rest 60 seconds and superset with the C2 movement.

C2. PULLING VARIATIONS

Choose one:

- 01 [Band Assisted Pull Up](#): 3 sets of As Many Reps as Possible (AMRAP.) Use a band thickness you can perform 8-10 reps with.
- 02 [Pull Up](#): 3 sets of AMRAP.
- 03 [Lat Pulldown Machine](#): 3 sets of 10 reps at a 8 RPE. Rest 60 seconds and superset with the C1 movement.

D1. ISOLATION:QUADS

[Goblet Cyclist Squat](#): 3 sets of 15 at a 6-7 RPE.

Rest 60-120 seconds and superset with the D2 movement

D2. CORE: ANTI-ROTATION

[Standing Band/Cable Anti-Rotation Press](#): 3 sets of 10 reps/side at a 7-8 RPE.

Rest 60 seconds and return to the D1 movement above.

E. FINISHER

[KB Chain](#) or [DB Chain](#): Single Arm Clean (1x), Single Arm Push Press (1x), Overhead Reverse Lunge (1x), Squat (1x), Swing (1x).

That entire chain is one rep on one side. Perform 3 reps in a row without setting the weight down. Then, switch sides for 3 reps.

That's one set. Perform 3 total sets with 60 seconds rest in between sets.

4-DAY UPPER / LOWER BLUEPRINT

The 4-Day Upper/Lower Blueprint is built for those ready to take their training a step further. By splitting your workouts into two focused upper body days and two focused lower body days, you'll unlock

more volume, intensity, and progression. This approach lets you push harder, recover better, and build not just strength and muscle, but also the athletic qualities that carry over to performance and life.

DAY 1 LOWER BODY

A. POWER

You have two options here:

- 01 [Box Jumps](#): 3 sets of 5. Rest 30 seconds between sets.
- 02 [Squat Jumps](#): 3 sets of 5. Rest 30 seconds between sets.
Choose this option if you don't have an elevated surface you can jump onto.

B1. SQUAT VARIATIONS

You have two options here:

- 01 [Barbell Back Squat](#): 4 sets of 8. Choose high bar or low bar and use a weight at a 6-7 RPE.
- 02 [Dumbbell Goblet Squat](#): 4 sets of 8 at a 6-7 RPE.
Choose this option if you don't have access to a barbell/squat rack.

Rest 60-120 seconds and superset with the B2 movement down below.

B2. ISOLATION: ABDUCTORS

Copenhagen Plank [Short Lever](#) or [Long Lever](#): 3 sets of 15-30 seconds on each side at a 7-8 RPE. The longer the lever, the more stress on your adductor!

Rest 60-120 seconds and return to the B1 movement above.

C1. SINGLE-LEG: KNEE DOMINANT

You have two options here:

- 01 [2DB Rear Foot Elevated Split Squat](#): 3 sets of 8 reps/side at a 7-8 RPE.
- 02 [2DB Split Squat](#): 3 sets of 8 reps/side at a 7-8 RPE.
Opt for these if the rear foot elevated version is too challenging!

Rest 60 seconds and superset with the C2 movement.

C2. HINGE VARIATIONS

- 01 [BB Hip Thrust](#): 3 sets of 10 reps at a 8 RPE.
- 02 [BB Romanian Deadlift](#): 3 sets of 8 reps at a 8 RPE. Opt for these if the set-up of the hip thrust is too cumbersome.
Rest 60 seconds and return to the C1 movement.

D1. ISOLATION HAMSTRINGS

Choose from one of the following options in this hamstring series:

[Stability Ball Hamstring Curl Series](#): 3 sets of 10-12 reps (on each side if applicable) at a 8-9 RPE.

Rest 60 seconds and superset with the D2 movement down below.

D2. CORE: FLEXION

Choose from one of the following options in this core series:

[Tuck Up Series](#): 3 sets of 8-10 reps (on each side if applicable) at a 8-9 RPE.

Rest 60 seconds and return to the D1 movement above.

E. FINISHER

Perform this sequence back-to-back-to-back in a circuit for 4 total rounds.

- 🏹 [2KB/2DB Farmer Carry](#): 30 seconds
- 🏹 [Tall Plank KB/DB Drag](#): 30 seconds
- 🏹 Rest: 30 seconds

DAY 2 UPPER BODY

A. POWER

Choose from one of the following options in this plyo pushup series:

[Plyo Pushup](#): 3 sets of 5. Rest 45-60 seconds between sets.

B1. BENCH PRESS VARIATIONS

You have two options here:

- 01 [Barbell Bench Press](#): 4 sets of 8 at a 6-7 RPE.
- 02 [2DB Bench Press](#): 4 sets of 8 at a 6-7 RPE. Choose this option if you don't have access to a barbell/squat rack.

Rest 60 seconds and superset with the B2 movement down below.

B2. ISOLATION: REAR DELTS

You have two options here:

- 01 [2DB Bent Over Reverse Flye](#): 3 sets of 10 at a 8 RPE.
- 02 [Cable Rear Delt Crossover Flye](#): 3 sets of 10 at a 8 RPE. If you have access to a cable machine, you can opt for these instead.

Rest 60-120 seconds and return to the B1 movement above.

C1. OVERHEAD PRESSING VARIATIONS

You have two options here:

- 01 [1/2 Kneeling Single Arm Overhead Press](#): 3 sets of 8 reps/side at a 7 RPE.
- 02 [Standing Single Arm DB Overhead Press](#): 3 sets of 8 reps/side at a 7 RPE. Choose this option if kneeling bothers your knees.

Rest 60 seconds and superset with the C2 movement.

C2. ROW VARIATION

[DB 3-Point Row](#): 3 x 10 reps/side at a 7 RPE.

Rest 60 seconds and return to the C1 movement.

D1. ISOLATION: DELTS

[2DB Lateral Raise](#): 3 sets of 12 at a 8-9 RPE.

Rest 60 seconds and superset with the D2 movement down below.

D2. ISOLATION: ARMS

[2DB Seated Biceps Curl](#): 3 sets of 12 at a 8-9 RPE.

Rest 60 seconds and return to the D1 movement above.

E. FINISHER

Choose between any cardio modality (running, rowing, biking, jumprope, burpees, etc.) and perform:

- 🏹 30 seconds at a steady pace (~RPE 6)
- 🏹 20 seconds at a fast pace (~RPE 8)
- 🏹 10 seconds all-out effort (~RPE 10)

Perform 3-4 rounds with 30-60 seconds in between rounds.

DAY 3 LOWER BODY

A. POWER

You have two options here:

- 01 [Kettlebell Swing](#): 3 sets of 8 at a 6-7 RPE. Pick a weight that feels snappy and powerful. Rest 45-60 seconds between sets.
- 02 [Broad Jumps](#): 3 sets of 5. Rest 30-45 seconds between sets. Choose this option if you'd prefer a jumping power development variation.

B1. DEADLIFT VARIATIONS

You have two options here:

- 01 [Barbell Deadlift](#): 4 sets of 5 at a 7 RPE.
- 02 [Trap Bar Deadlift](#) or [Kettlebell Deadlift](#): 4 sets of 5 at a 7 RPE.

Rest 60-120 seconds and superset with the B2 movement down below.

B2. ISOLATION CALVES

You have two options here:

- 01 [Single Leg Calf Raise off Bumper Plate](#): 3 sets of 10-12 reps/side at a 8-9 RPE.
- 02 [Weighted Single Leg Calf Raise off Bumper Plate](#): 3 sets of 10-12 reps/side at a 8-9 RPE. Opt for these if you want to make the movement even more challenging!

Rest 60 seconds and return to the B1 movement above.

C1. MULTI-PLANAR STRENGTH

[Goblet Lateral Lunge](#): 3 sets of 8/side at a 7-8 RPE.

Rest 60 seconds and superset with the C2 movement.

C2. HINGE VARIATIONS

You have two options here:

- 01 [2DB Romanian Deadlift](#): 3 sets of 10 reps at a 8 RPE.
- 02 [2DB Single Leg Deadlift](#): 3 sets of 8 reps/side at a 8 RPE.
If you have the time and energy, then opt for these single leg deadlifts. Just keep in mind, it will be double the reps compared to the bilateral version above!

Rest 60 seconds and return to the C1 movement.

D1. ISOLATION: QUADS

[Goblet Cyclist Squat](#): 3 sets of 15 at a 6-7 RPE.

Rest 60 seconds and superset with the D2 movement down below.

D2. CORE: ANTI-ROTATION

[Standing Band/Cable Anti-Rotation Press](#): 3 sets of 10 reps/side at a 7-8 RPE.

Rest 60 seconds and return to the D1 movement above.

E. FINISHER

[KB Chain](#) or [DB Chain](#): Single Arm Clean (1x), Single Arm Push Press (1x), Overhead Reverse Lunge (1x), Squat (1x), Swing (1x).

That's one rep on one side. Perform 3 reps in a row without setting the weight down. Then, switch sides for 3 reps.

That's one set. Perform 3 total sets with 60 seconds rest in between sets.

DAY 4 UPPER BODY

A. POWER

You have two options here:

- 01 [Single Arm DB Push Press](#): 3 sets of 5 reps/side at a 5-6 RPE. Keep these light and powerful!
- 02 [Medicine Ball Floor Slam](#): 3 sets of 8 reps. If you have access to a soft medicine ball, then opt for these MB Slams!

B1. PULLING VARIATIONS

You have two options here:

- 01 [Band Assisted Pull Up](#): 4 sets of As Many Reps as Possible (AMRAP.) Use a band thickness you can perform 8-10 reps with.
- 02 [Pull Up](#): 4 sets of AMRAP.
- 03 [Lat Pulldown Machine](#): 4 sets of 10 reps at a 8 RPE.

Rest 60-120 seconds and superset with the B2 movement down below.

B2. PRESSING VARIATION

[2DB Incline Bench Press](#): 4 sets of 8 reps at a 7-8 RPE.

Rest 60 seconds and return to the B1 movement above.

C1. HINGE VARIATIONS

You have two options here:

- 01 [Seated Cable Row](#): 3 sets of 12 reps at a 8-9 RPE.
- 02 [2DB Bent Over Row](#): 3 sets of 10 at a 8 RPE. If you don't have access to a cable/band setup, then opt for these dumbbell bent over rows instead!

Rest 60 seconds and superset with the C2 movement.

C2. PUSHUP VARIATION

Choose from one of the following options in this pushup series:

[Pushup Series](#): 3 sets of 8. Choose the variation in the series that you can perform 10-12 reps of.

Rest 60 seconds and return to the C1 movement.

D1. ISOLATION: DELTS

[2DB Front Raise](#): 3 sets of 12 at a 8-9 RPE.

Rest 60 seconds and superset with the D2 movement down below.

D2. ISOLATION TRICEPS

You have two options here:

- 01 [2DB Lying Triceps Extensions](#): 3 sets of 12 at a 8-9 RPE.
- 02 [Band/Cable Low Overhead Triceps Extension](#): 3 sets of 12 at a 8-9 RPE. If you have access to a band/cable setup, then opt for these tricep extensions instead!

Rest 60 seconds and return to the D1 movement above.

E. FINISHER

Perform this sequence back-to-back-to-back in a circuit for 4 total rounds.

- 🏹 [2KB/2DB Thruster](#): 20 seconds
- 🏹 [Front Plank](#): 20 seconds
- 🏹 Rest: 20 seconds

What's Inside the App?

FRESH MONTHLY PROGRAMMING

No guesswork, always progressing.

PROGRESS TRACKING BUILT IN

Watch your numbers climb!

COMPREHENSIVE TRAINING PROGRAMS

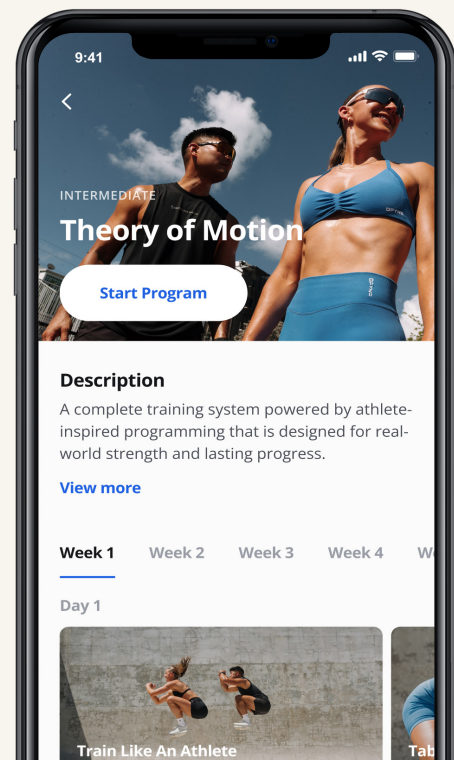

Functional strength, mobility, multi-planar movements, core stability, and athleticism.

CLEAR DEMOS & COACHING CUES

Train with confidence.

SUPPORTIVE COMMUNITY

Accountability from people on the same journey as well as the Theory of Motion team.

The Blueprint is your Snapshot.
The App is Your Full Journey.

If you're ready to keep building momentum, the Theory of Motion App is the next logical step.
Join the Theory of Motion App Today!

A Note From *Jason & Lauren*

Thank you for trusting us with your training journey! We've spent over 15 years coaching thousands of people in person and sharing our message with millions online, but nothing means more than connecting with you here. This Blueprint is our way of giving back some of the best lessons we've learned along the way.

Our hope is that you finish these workouts not just feeling stronger, but feeling more confident in your ability to move, recover, and take on whatever life throws your way. Training is about more than sets and reps - it's about building resilience, energy, and freedom in your body!

If this guide has helped you, imagine what consistent, progressive programming and a supportive community can do. That's what we've built inside the Theory of Motion App, and we'd love for you to be part of it.

Keep moving with purpose, and we'll see you inside.

Warmly,

Jason and Lauren
